

WITH THE FARMERS

By Prof. W. F. MASSEY

Friday, January 16, 1914.
Fungus Troubles.
"I am seriously bothered with a fungus disease, both under glass and in the open ground. It is a two-cycle fungus. The first stages are on the lettuce, causing it to rot off. It attacks cucumbers at the axils of the leaves, and on tomatoes at the axils of the leaves. I have tried the remedy 'I' hardly think that it is the same fungus that attacks the different plants. The fungus that causes the 'drop' or wilt in lettuce is common in all parts of the country, and there are blights and rusts that attack tomatoes and cucumbers, but they are different from the disease that destroys lettuce. The best thing I can do is to spray with a 2 per cent solution of formaldehyde for the lettuce and spraying with Bordeaux mixture for the cucumbers and tomatoes. Tomatoes should be sprayed on the seed bed, and then every ten days after they are out, until the plants are about half grown. This will keep the foliage healthy and insure a better crop. As a preventive of the lettuce drop, it is well to soak the seed with the formaldehyde solution before setting the plants. But in every difficulty of this kind, you had better send specimens of the affected plants to the State experiment station, where they have microscopes and laboratory, and men devoted to the study of such things. The cultivators of the soil do not get in as close contact with their experiment station as they should. I think that the fungus on your tomatoes is what is known as one of the Fusarium species."

Sowing Rape and Rye.
Charlotte County: "What is the best time to sow rape for hog feed, and the time limit? What do you think of mixing half a bushel of rye to the acre. I have heard that any time will do, and it will always grow as high as the fence. Can you suggest anything better to do this winter that will be ready sooner for hogs? Of course, rye is a very hardy plant, and may grow in Charlotte now. There are two seasons for sowing rape. It is sown in late August or early September, and gives it a fertilizer strong in nitrogen and phosphoric acid. This will bring it in good shape for the hog in November. Then you can sow a crop for spring and early summer pasture the last of February or early March. In sowing the fall crop it is better to mix rape and crimson clover, six parts of rape and four parts of clover seed an acre. Rye will make some early green stuff, but at best it is poor feed. Sown in September, will make a far better feed crop, and sown in February the oats will make a good early hay crop. I would not sow fall rape later than the middle of September, but the spring crop can be sown in February whenever you can catch the soil in good shape to work."

Inoculating Alfalfa Seed.
West Virginia: "In your article in The Times-Dispatch of Saturday the 13th inst. under heading 'Preparing for Alfalfa,' you advise that 'it is cheaper to inoculate the seed than to use the seed just before sowing. Will you please explain this process, as I do not understand it?'"

The cultures referred to are the laboratory cultures of the bacteria that live on the roots of the various legumes. These bacteria are cultivated in a nutrient material, usually the Japanese jelly Agar-Agar. The cultures for an acre of alfalfa are made in bottles, and the contents are mixed in water, and this used for moistening the seed. In this way the bacteria get attached to the seed and are carried to the soil, where they are protected from the sun, the great destroyer of bacterial growth. This inoculation is used in order to introduce into the soil the particular form of bacterium which lives on alfalfa, or clover or peas. The same inoculation can be accomplished by getting soil from a field where alfalfa has grown and mixing it with the seed, or by using a barrel of such soil spread over an acre, and at once covered from the sun. The inoculation will use the artificial cultures. In fact the Western experiment stations have found that the inoculation with soil seems to be more complete than the artificial form, from the long time worms to very small white ones. These small worms show their presence by causing the animal to have an itching about the anus, and making it rub the hind part of the tail. Preventive treatment is better and more economical than medicines. Horses that are kept constantly on one sort of food are more liable to the trouble than a variety of foods is used. Salt should always be kept where they can lick it, but not mixed in the feed. The stubble should be kept very clean and white-washed, and the water should be of the cleanest. Animals which are affected with worms should have an abundance of nutritious and laxative food, flaxseed meal for instance, and they will very often recover completely without any medicine. For a tonic condition powder the following will be found good: four ounces pulverized sulphate of iron (green), two ounces nitrate of iron, two ounces pulverized ginger root, two ounces pulverized gentian root, two ounces pulverized sassafras root, and give a half to a heaping teaspoonful in the feed two or three times a day. A mixture of two pounds of salt, two pounds of hard wood ashes and one pound of sulphur, mixed and placed where the horses can have access to it, will make a good preventive and treatment. A drench of two ounces of turpentine for a horse, mixed in a quart of milk,

is also good and should be followed by a purgative dose to expel the worms. Scaldie is a very good spray for San Jose scale.

Cowpeas.
"I am a newcomer in Virginia, and I have heard them call you the 'apostle of the cowpea.' I have never grown them, and hear so much about them that I have concluded to write to you, asking you to give, in The Times-Dispatch, full information in regard to the value of the cowpea for soil improvement and for forage; and am sure that there are many others like me who would like to have this crop fully discussed, though Virginians in general may know all about them."

I have written so much about cowpeas in the past twenty-five years that I fear many of our readers may get tired of the repetition. But, as you say, there are many coming South who would like to be fully informed in regard to this very important crop. I will ask our readers of the home station to bear with me in endeavoring to fully explain the uses of the cowpea.

The so-called cowpea is more related to beans than peas proper. They are tender plants, and must not be sown till the soil is warm. They can be sown in the fall, but the best time is late May to middle of July, and they make an important crop for following small grains or early truck crops for the improvement of the soil. They belong to the great botanical order leguminosae and share with all the other members of this order of plants in having on their roots parasitic micro-organisms, known as bacteria, which live in certain knots or nodules on the roots. These are not purely parasitic, but rather symbiotic organisms, since they furnish the plant far more than they take from it. They seem to be nitrogen fixers, oxidizing the free nitrogen gas in the air which penetrates the soil, and thus making nitric acid, which at once combines with some base in the soil and becomes a plant food. The peas take it up, and whatever plant is associated with the peas will share in this, for it has been found that where peas are sown among corn at fall sowing, there will be an increase in the corn over the land where no peas are sown. This shows why I think nitrate is formed in the soil. This, however, is a theory, but as good as fact, for the bacteria are certainly just how the bacteria do furnish the nitrogen. But it has been abundantly proven that they do get and fix the nitrogen in some way.

As Soil Improvers.
One of the greatest values of the cowpea is in its capacity to flourish on our poorest soils, even when not fertilized. It will thrive on a soil that is acid, and for almost any kind of legume, and in fact it seems sometimes that sweetening the soil by an application of lime just before sowing peas has an injurious effect on the crop. The great value of the cowpea as a soil improver is its ability to get nitrogen from the air, and it will do more of this on a poor soil than on a rich one, for if there is plenty of available nitrogen in the soil, the peas will get less from the air, but will take advantage of that readily available in the soil. The mere growing of peas, and using them, and applying the soil, will not avail for soil improvement, for there is no crop grown that will more rapidly use up the phosphate and potash in the soil than the cowpea. The soil. The peas must be used, either as manure direct or by feeding them to stock and returning the manure to the soil. In the first start in the improvement of a very poor piece of land it may pay for a time to plow down the whole matured growth in order more rapidly to store the soil with humus. But with land in a fairly productive condition, where one can make two tons or more of hay an acre, I am sure that it is the best farm economy to save the crop as hay, and feed it to stock, and return the manure to the land that grew them. A crop of peas has a feeding value little less than alfalfa, ton for ton, and when used for stock, it is a very good feed, and by saving the manure carefully and applying it to the land as fast as made we can recover the greater part of its manurial value, we can certainly make profit enough from the crop to make it a very economical method for using the pea crop. But as a manure crop direct, the peas will have a mechanical effect on the land, making a heavy soil more mellow and a sandy soil more retentive of moisture.

Inoculation.
Where peas have never been grown, it will be wise to inoculate them either by the artificial culture or with soil from where they have been grown successfully. There are varieties that mature in sixty days, and others that need over 100 days. When sown very late, the early ones should be used. But I have taken too much space already, and will talk of varieties later.

Lower Court Affirmed.
In the appeal of the Lanston Monotype Machine Company against The

Standard Piano Company, the lower court affirmed the judgment of the Circuit Court of the City of Richmond, which had awarded a verdict of \$100,000 to the Standard Piano Company.

Insurance Company Must Pay.
The court also decided the peculiar case of the Mutual Life Insurance Company of New York, against Board of Directors of the City of Richmond, which had awarded a verdict of \$100,000 to the insurance company.

Commonwealth vs. Southern Railway Company.
The court also decided the case of the Commonwealth vs. the Southern Railway Company, which had awarded a verdict of \$100,000 to the railway company.

Commonwealth vs. Lynchburg Young Men's Association.
The court also decided the case of the Commonwealth vs. the Lynchburg Young Men's Association, which had awarded a verdict of \$100,000 to the association.

Commonwealth vs. City of Richmond.
The court also decided the case of the Commonwealth vs. the City of Richmond, which had awarded a verdict of \$100,000 to the city.

CONFLICT TIME ACT FULLY UNFOLD BY SUPREME COURT

(Continued From First Page.)

ing churches and charitable organizations from taxation the Young Men's Christian Association of that city was every year secured from the Corporation Court a correction of its assessment and obtained exemption.

The State Auditor claimed that because the Young Men's Christian Association derived a revenue of \$5,000 a year from the room of bedrooms and still other money from a bowling alley and billiard-room that it was no longer devoted exclusively to the educational and religious purpose for which it was established. The correction of assessment was refused by the Lynchburg Court, and the action sustained yesterday by the Supreme Court, the opinion being written by Judge Buchanan. The mere fact that the Young Men's Christian Association rents a bedroom and a billiard room to a young man who sells him food does not lessen the association's power to better his morals or help his education, the opinion said.

Insurance Company Must Pay.
The court also decided the peculiar case of the Mutual Life Insurance Company of New York, against Board of Directors of the City of Richmond, which had awarded a verdict of \$100,000 to the insurance company.

NEGRO WORKMAN BLOWN TO PIECES

Attempts to Thaw Keg of Dynamite, Which Explodes With Terrific Force.

John Rowell, a colored laborer, was killed yesterday morning, when fifty pounds of dynamite exploded near the South Richmond Pump-House. The accident occurred at 5:30 o'clock, when Rowell, who was employed by the Calhoun Construction Company, contractors working on the yard improvements for the Southern Railway, attempted to thaw out a keg of the explosive by pouring kerosene on it.

The exact cause of the explosion is not known. Rowell, who was an experienced man, was seen thawing the dynamite, and was warned by other laborers to be careful. He replied that he knew his business. Within a few minutes the giant blast occurred. No trace of the negro was found. As far as can be ascertained, he had no relatives in this section.

Coroner John W. Brodnax was summoned, but was unable to hold an inquest, owing to the fact that the remains could not be found. He expressed his opinion that the explosion was purely accidental.

The explosion was heard throughout the city, and several windows in Woodland Heights and South Richmond were broken by the shock. The building looked as if it had been hit by a cannon. The workers were injured, although a shower of rock was scattered over an area of several hundred feet. The hole ten feet in diameter and about that depth marked the spot where the blast occurred.

Complaints of the big charges of dynamite used by the concern had been taken by the Police Station. Officer Fred Breeden, who had been detailed by Captain A. S. Wright to investigate the report, was on his way to the scene of operations when the explosion took place.

WORLD NEEDS WOMEN
Mrs. Jones Tells What Home Would Be Without a Mother.

Mrs. Archer Jones addressed yesterday afternoon before the Equal Suffrage League on "Woman and Motherhood" was enthusiastically received by a large audience, her witty and sparkling manner and appearance. The meeting was presided over by Mrs. G. J. Jarvis.

Mrs. Jones said that the whole world had been handled like a home without a woman. "Imagine," she said, "some of the things of a father with six or seven children, where there had not been a woman for, say, two months. Well, that is the way the whole world has been looking for hundreds and hundreds of years."

Why Women Should Vote will be the topic of a lecture given by Mrs. Jones at the Grace Arents School by the Rev. J. M. Rowland, pastor of Laurel Street Methodist Church, and Mrs. B. B. Valentine, president of the Equal Suffrage League.

GLASS CUTTERS REAPPEAR
Fresh Marks Are Found on Windows of Broad Street Stores.

Vandalism, which some months ago created a sensation by smashing valuable plate glass windows of Broad Street stores, have again made their appearance. This time marks were found on the windows of stores in Broad Street from Seventh to Ninth, including the Hotel Richmond, Messrs. Green, Jacobs & Levy and other places.

Report of the matter was made yesterday to the Police Station. The police have never succeeded in capturing any of the persons responsible for the glass-cutting. Chief of Police Werner has not given up hope of finally catching them. The discovery of the fresh marks has led the police to exert further efforts to find out who has been guilty of the vandalism.

Meeting of Auto Club.
A meeting of the Richmond Automobile Club was held last night in the rooms of the organization at the Jefferson Hotel next door to a clock. Business of great importance was considered, and members are urged to attend.

Syracuse Schedule.
Syracuse, N. Y., January 15.—The football schedule of Syracuse University, announced to-day, includes these dates: October 10—Princeton, at Princeton; October 17—Cornell, at Syracuse; October 24—Columbia, at Syracuse; October 31—Carleton, at Buffalo; November 7—Dartmouth (place unsettled); November 14—Dartmouth (place unsettled); November 21—Dartmouth (place unsettled); November 28—Dartmouth (place unsettled).

Moschetti Sues the City.
Sue was instituted yesterday in the City Circuit Court by Joseph D. Moschetti against the city of Richmond for \$10,000. No declaration was filed. Moschetti claimed that his property was damaged by a fire which spread from the city dump.

"RUBY ROB" GIVEN HIS DAY IN COURT
New York, January 15.—Robert Fitzsimmons, fifty-three years old, former heavyweight champion boxer, was yesterday appeared before Justice Seabury in the Supreme Court to-day and asked to be permitted to reappear in the ring, a privilege denied him by the State Athletic Commission.

"When I return to the ring in this town," said Fitzsimmons, "there will be no more foot races or tag games inside the ropes. What people want is some genuine boxing." Fitzsimmons is still in good physical trim. Mike Donovan, instructor of boxing at the Police Athletic Club, set forth that Fitzsimmons could meet the best in the ring without danger.

Prisoner Is Recaptured.
Arthur Washington, colored, a "trusty" at the City Jail, who walked away several days ago, was caught yesterday by Detectives G. P. Smith and Bryant.

Writ of Error Granted.
The State Supreme Court yesterday granted a writ of error in the case of J. Preston Carver, appellant, against the City of Richmond, appellee, brought up from the Law and Equity Court of the City of Richmond. The bond was fixed at \$2,000. The writ was granted on December 30. The date for the meeting will be announced in a few days.

Social Meeting Postponed.
The meeting of the general council of Social Workers, which was to have been held last night in the auditorium of the Chamber of Commerce, has been postponed indefinitely. The council was to have received the report of the committee appointed to devise a plan for a charity organization for negroes. The date for the meeting will be announced in a few days.

John Craig Caught in Baltimore.
John Craig, known to the police as "Hank," colored, was arrested in Baltimore yesterday, according to a telegram received by Chief of Police Werner. He is wanted in this city on the charge of shooting Nellie James, who colored, on December 30. Detective-Sergeant Krenzel will leave to-day for the prisoner.

Train Hits Young Man, Who Falls Forty Feet, Fracturing Skull.
Harry Smith, twenty-one years old, who only recently recovered from an attack of typhoid fever at the City Hospital, was knocked from the Chesapeake and Ohio Railway Viaduct, near Seventh Street, yesterday afternoon shortly after 1 o'clock, and fell forty feet striking his head. Examination by Dr. M. L. Boyle, Jr., ambulance surgeon, showed that he had sustained a fractured skull, and he was removed to the hospital. Last night his condition was regarded as critical, though it was said he had a fair chance of recovery. Smith is understood to have been attempting to catch a freight train when he fell. That he was not instantly killed was regarded as remarkable.
